

Yawning is essential for maintaining good health

Even when warned...

"Are you trying to make me sick...?"

It's also possible to retort in kind.

"Being lax" is a morality from a bygone era with no medical basis, and in this day and age, even in the service industry, customers need to understand this.

(Medical explanation)

It is a physiological phenomenon that controls the circulation of cerebrospinal fluid, and it is better to raise your voice loudly and cry than to endure it.

Report

Progress on the creation of the song "An Meiden Spring"

I've reached the second page and am about 20 measures into the piece.

This piece is being created using a different method than the previous two songs.

I'm writing chords into notes, and then making overall adjustments and corrections at the end, structuring it to reflect the "spring" theme from the beginning.

Currently... I've only written the treble clef (right hand).

After structuring... I'll add the bass clef (left hand).

At this pace,

I think it will probably be completed around mid-May.
